

Nibrexo OS AI

07 — Frontend Architecture & UI/UX System v1.0

Production frontend blueprint for Nibrexo OS AI dashboard, workflows and user experience system.

1. Frontend Architecture Philosophy

- Frontend provides a clean control center for all Nibrexo operations.
- UI follows permission-based rendering; users only see allowed actions.
- Frontend communicates with backend APIs, never bypassing security rules.
- Reusable components reduce development time and maintain consistency.
- Design must support desktop, tablet and future mobile experiences.

2. Complete Frontend Flow

3. Frontend Application Structure

Layer	Purpose
Pages / Routes	Application screens
Components	Reusable UI blocks
Layouts	Dashboard and workspace structure
Hooks	Reusable logic
Services	API communication
State Management	Application data state
Utils	Helpers and shared functions
Design System	Colors, typography, components

4. Main Application Routes

Route	Purpose
/login	Authentication
/dashboard	Main overview
/social	Social accounts and publishing
/content	Content library
/inbox	Unified messages
/clients	CRM
/emails	Email automation
/ai	AI assistant
/settings	Configuration

5. Dashboard UI Architecture

QUICK ACTIONS

6. Core UI Components

- Navigation sidebar.
- Header with profile and notifications.
- Data tables.
- Cards and analytics widgets.
- Forms and validation components.
- Modal dialogs.
- Upload components.
- Chat/message components.
- Approval components.
- AI assistant interface.

7. Design System Rules

- Consistent spacing system.

- Reusable typography scale.
- Reusable buttons and inputs.
- Clear status indicators.
- Accessible contrast and readable layouts.
- Component naming consistency.

8. State Management Flow

9. Permission Based UI

- Buttons/actions hidden when user lacks permission.
- Backend still validates every action.
- UI permission is for experience, not security.

10. Social Dashboard Experience

- Connected accounts view.
- Content creation workspace.
- Scheduling calendar.
- Publishing status.
- Comments and messages overview.

11. Email Dashboard Experience

- Template manager.
- Client selection.
- Email preview.
- Automation sequence builder.
- Delivery tracking.

12. AI Assistant UI Flow

13. Frontend Security Rules

- Never store secret API keys.
- Validate user sessions.
- Handle expired sessions gracefully.
- Sanitize user input.
- Use secure API communication.

14. Frontend Development Workflow
